

Job Description – Game Programmer

Job Description

Arkadium Inc, a leading game developer and distributor in NYC, is looking for talented game programmer to assist with online game development. You will work with the Company's Manager of Game Development to develop new flash games.

Requirements

Solid OOP experience and strong Actionscript 3.0 or C++ skills are a must. Expertise with other object oriented programming languages is highly preferable. Previous experience in game development is also desirable.

You must be a talented, creative programmer and problem solver with good organization skills who is motivated to meet tight deadlines.

At Arkadium you will work in small teams with artists, managers and designers; Communicating effectively is a necessity.

Some of your tasks might include developing Facebook games that communicate to a variety of external web-services and socket servers.

About the Company

Arkadium is a leading provider of Facebook games, casual games, and custom advergames. Started in 2001, the Company is focused, young and aggressive. We have built an extremely talented team and have a great loft office in the Flat Iron neighborhood of New York City We regularly laugh, listen to music and play games. Yes, we actually like coming to work everyday!

Compensation Based on Experience.
